

Dear Sir,

Persico is pleased to announce that Persico has signed a marketing agreement with Ferry Industries, Inc. USA in which Persico will act as Ferry's sales agents for the Ferry Rotospeed line of rotational molding machines. Ferry is a leading world-class manufacturer of rotational molding machines with its Rotospeed Independent Arm Machines, Rocking Oven Machines, and Shuttle Machines. Currently Ferry has many installations in the European market and the new alliance with Persico will provide continuous contact for the machinery clients. Persico will sell new installations and will provide service and spare parts for the existing Ferry installations.

In early 2009, Ferry will supply a Ferry RS 3000 Independent Arm Machine to Persico to be installed at the Persico facility in Italy and will be used as a demonstration facility for customers.

Likewise, Ferry will be the agent in North America for Persico's innovative Leonardo rotational molding machine. The new relationship was signed in November 2008 and be active from January 2009 for both companies. Within a few months a Leonardo machine will be installed in Ferry, for demonstration to the American clients.

Harry Covington states that the new relationship for Persico to represent Ferry will be important to the existing customer base in terms of technical support of existing machines and for generation of new business opportunities for the Ferry product line. According to Covington, the Persico company and Ferry have much synergy in the market place and this synergy will be for the benefit of the European customers.

Please have a look to the Brochure enclosed to have an impression about the machines

Don not hesitate to contact us for any question
