

Naturally Perfect Rotational Moulding

Persico has given shape to ideas since 1976. It is world leader in the production of rotational moulding equipment and develops custom moulding solutions and automation systems. Persico also offers a complementary range of services: a complete technical department, five-axis CNC milling machines for rotational moulds, a specialized foundry, a tooling department utilizing CAD-CAM technology and, above all, know-how shared with our customers.

Leonardo, the first fully automatic rotational moulding machine, optimizes and redefines the role of manual labour, lowers production costs, and improves the solidity and uniformity of the finished product.
